*"Quality and Service Since 1932"*

Volume 12

## *What Can I Plant over the Septic System?*

There are several things to consider when planting around septic systems, leach fields, mounds, spray, and drip fields. The wrong plants can cause maintenance problems and damage the system. Aggressive plants have root systems that can interfere with the evaporation process, separate risers, or damage concrete joints trying to enter the tanks. Grasses, Trees, or other plantings should be carefully considered before planting around or near the septic system.

### So, What Can I Plant?

Pre-mixed eco grass with fescue, tufted fescue, feather grass, mondo grass, liriopse, armeria, white clover, thyme, sedum, short rooted perennials, and moss.

Trees can have aggressive root systems and will travel for water, so keep at least 36 feet away. Dwarf trees can be less aggressive, but will still need to be kept at least 15 feet from the system.

### Why Choose **MACK INDUSTRIES**?

- Locally Owned and Operated.
- Experienced Technicians.
- Provide maintenance and repairs, not just inspections.
- Over 50 years of experience installing and designing Sewage Treatment Systems.
- Norweco and Jet Distributors.

*Remember, Prevention is the best form of defense!*
