Monitoring Options for your NPDES System

Ohio Environmental Protection Agency requires your Non-Failsafe NPDES System to be monitored by a service provider for any alarms that may occur on the system.

This requirement can be met by several options:

Phone: This connection can be from a local Phone Land Line connection compatible with DSL service. It would be run from a telephone jack from your existing line to the control panel for the system.

Internet: A Voice-Over-Internet-Protocol (phone service through your local cable internet provider) is also available and would require a connection from your modem to the control panel.

Cellular: A strong cellular signal would be required at the control panel location, and would not be a part of your current cell phone service. This would be a stand alone service.

All monitoring will require a yearly monitoring fee after the initial warranty period.

Contact your Installer for details.

Why Choose **MACK INDUSTRIES**?

- Locally Owned and Operated.
- Experienced Technicians.
- Provide maintenance and repairs, not just inspections.
- Over 50 years of experience installing and designing Sewage Treatment Systems.
- Norweco and Jet Distributors.

Remember, Prevention is the best form of defense!
